\*Required support for gate posts and strength for hardware connections.

## How to calculate fence materials:

1. Determine total number of lineal feet and subtract footage for gates
2. Calculate # of fence panels needed: Total lineal feet divided by panel width (feet) = total # of panels  
**Note:** panels can be cut to shorter width if necessary
3. Calculate # of posts needed:
  - 1 post per panel + 1 end post to end the fence run
  - 1 end/gate post per gate (don't forget 2 post inserts for each gate)

### Key:

- Line posts – use when connecting fence panels in a straight line
- Corner posts – use when connecting fence panels at a 90 degree angle
- End posts – use when ending a fence run or on either side of a gate
- Fence panels
